TRUSTED GOLDENDOODLE PUPPIES · KNOXVILLE, TENNESSEE

OUR PROMISE

Lifetime Genetic Health Guarantee

All of our puppies are guaranteed to be in good health and free from visible signs of infection and contagious or communicable diseases when purchased.

01 Lifetime genetic health guarantee

If your puppy is diagnosed by a suitably qualified veterinarian as having a life-threatening or seriously disabling defect of certain congenital/genetic origin at any time in its life, we will refund 100% of the purchase price or pay for treatment, up to the purchase price, at a veterinary clinic approved by us. We reserve the right to require a second opinion from a veterinarian of our choice at our expense. If the puppy is euthanized or in any way disposed of without a second opinion from the Seller's veterinarian, the Buyer waives all rights to a refund.

02 What is covered

This Guarantee covers both common and uncommon diseases of definite genetic or congenital origin that are either life-threatening or severely impact your dog's quality of life. This includes severe hip dysplasia, Grade 4 patella luxation, and Grade 3 elbow dysplasia, provided that the dog is not sterilized before 12 months of age and is never allowed to become obese. It also covers Grade IV or V heart murmurs that were present at the puppy stage and persist after 20 weeks of age.

In addition, all genetic diseases in goldendoodles that we are able to genetically screen our parent dogs for are covered by this Guarantee, including:

- Mitral valve dysplasia
- Patellar luxation
- Retinal dysplasia
- Subaortic stenosis

Please note: this warranty is void in the event of an undetermined or inconclusive diagnosis. Diseases of likely environmental origin (likely to be caused by suboptimal diet, chemicals, or trauma) are not covered.

03 In the event of death

If your puppy dies and you request a refund, you must have a necropsy performed by a suitably qualified veterinarian at your expense to determine the cause of death. Your puppy will be refunded if the death was caused by a genetic problem or an illness which your puppy had at the time of purchase. For this reason, it is advisable to have your puppy checked by your own veterinarian within 72 hours of purchase.

04 Caring for your puppy's long-term health

For the long-term health of your puppy we recommend a diet of high-quality dog food and spaying or neutering at 12 months of age or older. We also recommend minimizing exposure to veterinary drugs (such as flea and heartworm treatments, vaccinations and wormers) to the minimum dosage and frequency needed to safeguard your pet's health.

05 Lifetime rehoming guarantee

Your puppy also has a lifetime rehoming guarantee with us. Should you become unable to care for your dog at any stage of their life, you can contact us. Under no circumstances must your puppy ever be given up to a shelter.
